

Too small to report on ESG?

Still smart to prepare.
Here's the simple way to
get started.

What to do now

Low effort now, scale later

VSME is a voluntary ESG framework for small companies that aren't required to report yet.

It provides an easier route to a complete, credible ESG report, ideal for smaller teams.

If you need to report under other standards later, your VSME data can be reused.

EU Omnibus = extra time, not stop

Even when reporting isn't mandatory for everyone, customers, banks and other stakeholders expect access to basic ESG data. VSME gives a practical structure to log the essentials without the heavy process.

Our certified sustainability experts can guide you and help you with next steps.

Choose your level

Basic Module	Comprehensive Module
Minimum sustainability requirements Built for small teams Includes key metrics that small businesses should have ready	Includes data likely to be requested by banks or larger customers Suitable for companies preparing for upcoming regulatory changes

Basic or Comprehensive?

With only a little extra effort, the comprehensive module gets you ESG ready. Choose this if you can, it's only a small step up. Start with basic if you have very limited time and resources.

We support both modules with custom VSME templates included in Metizoft ESG.

Optional: Run a quick DMA

VSME doesn't require a Double Materiality Assessment (DMA).

But it can be helpful to run a brief check to identify your most relevant, high-impact topics and set priorities. Alternatively, you can start without one and run it later if needed.

Build and publish your report

Easily share your key data, targets and planned actions in a customisable report that shows you take sustainability and transparency seriously.

Collect and track ESG data, then export your tailored reports with your own branding, text and images.

Scale as needed

Once you have established a reporting practice in either of the VSME modules, your data is organised and ready for future requirements and standards.

If your business grows, or the regulations change, you can keep going in the same software without starting over.

(CSRD/ESRS, GRI, ISSB, VSME)

Credibility, not complexity

Stay in control and ahead of coming demands.

By having core ESG data ready, you prove to customers and other stakeholders that you are prepared, and that you value sustainability and transparency.
